Efficient Usage of Adabas Replication

A Practical Solution Finder

2011. Approx. 250 pp. With 100 Fig. Softc. Approx. EUR 49,95. ISBN 978-3-8348-1730-3

In today's IT organization replication becomes more and more an essential technology. This makes Software AG's Event Replicator for Adabas an important part of your data processing. Setting the right parameters and establishing the best network communication, as well as selecting the efficient target components, is essential for successfully implementing replication. This book provides comprehensive information and unique best-practice experience in the field of Event Replicator for Adabas. It also includes sample codes and configurations making your start very easy. It describes all components necessary to replicate Adabas data successfully, efficiently and securely from the mainframe to Adabas and non-Adabas target databases - located on the mainframe or any open system. The author's comprehensive experience comes from Adabas replication to Windows, primarily on the subscription database and the Reptor engine. This can easily be applied to UNIX and Linux systems. By also providing practical solutions to avoid common problems, the author's experience with mass data replication lets your project become a success story.

Contents

Different ways to replicate – Definitions and parameters – Compare files of source and target databases – Recovery after a crash – Problems and solutions – Monitors – Appendix (parameters, programs, examples, etc.)

Author

For nearly three decades, Dieter W. Storr has worked in the United States and Europe as an Information Technology specialist for the performance and tuning of databases and primarily mainframe operating systems. He recently finished a replication project and has extensive knowledge in teaching and giving presentations of database solutions and data modeling. Storr formed his company, Storr Consulting, Inc., in California and works for clients in Los Angeles, Chicago, Sacramento and New York.
